

Optical splitters of Fibrain series

| Type: | FPLC GOLD family of splitters | 27.08.2020 |
|------------|-------------------------------|------------|
| | | REV: 1.1 |
| | | МК |
| Reference: | FPLC-, see ref. system below | |

INTRODUCTION:

The Fibrain FPLC series of optical splitters can be applied for splitting of optical power transmitted in a fiber optic link. Versions with a large number of output ports are available while a small size of the product is guaranteed by the planar technology used. **Fibrain FPLC GOLD series** are available in 1x2N, 1x3N, and 2x2N types. Fibrain FPLC splitters ensure very high stability of operation within the whole 1260-1650 nm band and have perfect thermal stability, guaranteeing operation in thermal range -40/+85 °C. An important advantage from the point of view of link design and maintenance is high uniformity of attenuation. Fibrain FPLC GO splitters are available both without connector terminations (prepared for splicing) and any type of fiber optic connectors.

APPLICATION FIELDS:

FTTH access networks HFC and cable networks Other optical telecommunication networks

FEATURES AND ADVANTAGES:

Operating range 1260-1650 nm Temperature operating range -40/+85 °C Available types: 1x2N, 1x3N, 2x2N Low excess losses High attenuation uniformity G.657 standard fiber with reduced bending loss Available housings: SUS Minibox, ABS Blackbox Output form: Ribbon, 900 µm tube, 2.0 mm cable, length acc. to customer's order Available with any type of fiber optic connectors
